Remy Optimized Inventory (ROI)

ROI is a proprietary tool which maximizes sales, turns and profits by utilizing an exclusive algorithm of market research, industry data, and internal sales and proprietary data.

Remy's ROI utilizes a variety of industry data related to vehicles in operation and replacement rates to determine which SKU's and how many to stock for your trading area. The result is typically less money invested in inventory, improved sales and increased turns. It's what we like to call a win-win.

Request a Remy ROI for your business.
